

NSE Starts the Year with New Faces, Advanced Technology & a Fresh Look

2020 brings on much anticipation and excitement as National Security Electronics (NSE) looks forward to bringing a great deal of *NEW* to their integration. President Andrew Koller is confident his team will dominate in the next decade...

"The heart of our business model has always been customer satisfaction over everything. For NSE that means going above and beyond every day and we will continue that always."

NSE Welcomes Jesse Osuna to the Team

How will NSE stay on top of the latest technology while still providing trusted customer service? The answer is in the TEAM and NSE has a new power player on theirs. Jesse comes to NSE with expansive industry knowledge. Starting his journey in the ATM industry over 10 years ago, Jesse has traveled the world working on a variety of security systems. With certifications with every major manufacturer, Jesse is a master in all aspects of security. His experience in technical solutions have since transcended into a wealth of project management expertise and team management proficiency that will strengthen the foundation for NSE's future.

Welcome Jesse Osuna as NSE Operations Manager!

Providing excellent products, exceptional customer service and always looking forward keeps NSE successful. 2020 will only bring more of it.
-Jesse Osuna

New Year New Look

What better time than the NEW year than to debut a new appearance! We are now proudly known as...

NSE – National Security Electronics

The NSE brand is synonymous with quality work and reliable technology and this update reflects it seamlessly. Rolling out a new look is just the start of what is new with NSE in 2020. NSE is looking forward to showing clients and partners the personal side of what drives their team. Get ready for interactive digital content, contests, surveys, a personal look into community involvement and so much more!

Advanced Technology Spotlight

NSE clients are confident that all new technologies are thoroughly tested in advance of their deployment in the field. This practice strengthens our customer service goals and ensures quality. One item currently on the bench is an access control module that can be programmed to allow access only to a financial institution's customers specifically via their Debit/Credit Cards.

This is ideal for financial institutions to secure their ATM Vestibules for use by their clientele only.

If you would like more information on this access module, contact NSE at 855-673-4621 or sales@nse-corp.com.
