

## February News – Lessons, Growth & Changes Ahead

**Knowledge is power** and sometimes that power is used for greed. The most recent example occurred in our industry when a suspect group of burglars successfully broke into a credit union in California. Reports allege that the thieves entered the branch through the ATM room ceiling by cutting a hole in the roof. From there they quickly disabled the video surveillance and alarm system.

***How did they proceed to rob the site without getting caught?***

In this type of intrusion alarms would activate, however police would typically only survey the outside perimeter of the building. Since they would be unlikely to see any signs of break in and no visible threat, they leave the site concluding the instance was a false alarm. At that point the intruders have the rest of the evening to rob the branch. ***How could this have been prevented?***

NSE utilizes specific detection equipment placed in areas that would only be disrupted by this type of forced entry. NSE alarm configuration experts have been addressing a threat of this kind of intrusion for years. Our customers enjoy peace of mind that although this break in was unique, it is no match for our expertise.

**Here Comes ISC West** Let the countdown begin! Representatives from NSE are looking forward to ISC West for many reasons. With over 30,000 security professionals attending every year, ISC West is THE largest converged security industry trade show in the U.S. NSE focuses on the new products and technologies encompassing everything from access control to drones & robotics from over 1,000 exhibitors and brands. Are you attending this year?

NSE representatives would love to connect with you! Let's meet up and discuss the show, or even schedule a walk through the floor with one of our experts!

## Notice of Product Discontinuance

DMP has confirmed that their **System Link** end-user management software will be discontinued at the end of this year effective December 31, 2020. There are two recommended options - Virtual Keypad Access and Entré.

This cloud-based interface offers the same flexibility to manage system users, schedules, holiday dates, profiles as System Link and so much more. Remotely manage your systems with Virtual Keypad Access or NSE can manage it for you!

Entré gives you fast, simple point-and-click control over all aspects of your security system. Entré features an intuitive user interface for system monitoring and control. Depending on the type of facility or organization, there is a version of Entré that is tailored to fit your needs.

*If you have any questions on this discontinuance or interest in the Virtual Keypad or Entré, NSE experts are ready to help. Call us at 855-673-4621 or email at sales@nse-corp.com*
