

## New Focus – Screening, Prevention & Safety

**The Security Industry is always evolving** with new products, technology, systems and ideas. We have seen it all come and go but what drives the change? Historically the answer has been the emergence of new threats from “the bad guys”. Today we are combating a new threat, disease. Covid-19 has changed how the world views daily life. What does this mean for the security industry? The idea is the same, it is the emergence of a new threat and that threat is driving the change to new technologies.

**"Asking the question 'are we doing enough' regularly and repeatedly is critical."**  
- Dr. Maria Van Kerkhove, WHO

### Touchless Exit Devices

*This Touch Free button helps eliminate the spread of germs in medical facilities or high traffic areas. To exit, a person simply waves their hand in front of the device.*

### Temperature Screening Kiosks

*The Temperature Screening Kiosk is non-contact and designed to prevent the spread of viruses. Help maintain a safe and healthy environment for your employees, visitors and the general public.*

Live face recognition and automatic detection of body temperature abnormality.
